MAKING YOU MORE COMPETITIVE FOR THE FUTURE

SECURITY

COLLABORATION

STRATEGY

We live and work in an increasingly complex and challenging world where being proactive is critical to your success. Understanding this challenge, more and more corporations are equipping themselves for agility and opening themselves to significant competitive advantage in the process of creating business strategy.

HBMG business areas focus on collaboration, security, and strategic futures and insights to create a future focused vision for your organization. Collaboration is vital to success in today's ever changing global community. HBMG provides an unparalleled toolbox, eManagers, with the necessary diverse set of tools to enable efficient and secure collaboration between teams. Teams are quickly integrated with other companies, vendors, customers and even competitors. Sharing information is critical to the success of your teams. We provide the infrastructure for a secure environment, ideal for communicating, sharing, and managing your data.

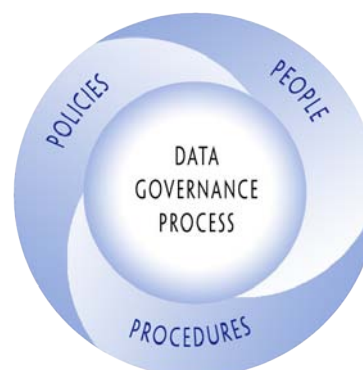

As information is shared, securing your intellectual assets is becoming more complex. Our security practice ensures the security of your data and corporate assets with the implementation of logical security.

SF&I provides future focused life cycle solutions allowing you to reap the benefits of group intelligence. Future focus makes your company more innovative and better prepared to meet and beat the future. Our collaborative solutions and strategies facilitate communication between teams which is key to continued innovation meaning more profit for your bottom line and growth.

We succeed at what we do, which is some of the most innovative and challenging work in business today. We are successful because of our deeply collaborative culture and the use of the tools, services and strategy we sell to our clients. Our values and our culture help create deep, lasting relationships with our clients and colleagues alike.

SECURITY

The explosive growth of the Internet economy in recent years and new intranet enterprise applications has heightened requirements for continuous availability of mission-critical data. Malicious traffic such as viruses, spy ware, intrusions and service attacks are a constant threat to your company's network, data, time and employee productivity. As these threats grow in sophistication and severity, so does the challenge for your IT department to keep up with the threats.

HBMG provides a comprehensive multi-layer security approach that works together to minimize down-time from individual threats, reduce risks with blended threats and coordinate security alerting, logging and reporting.

HBMG's Managed Security Services provide:

Managed Firewalls	Anti-Virus/Anti-Spyware
Web Filtering	Spam Trackers
Intrusion Prevention	Site-to-Site IPsec VPN
Site-to-Site MPLS VPN	Managed SSL VPN

Logical Security Practice

Security convergence is not about one person playing the crucial leadership role, but more about the processes that an organization uses to ensure the security of their assets across departments and diverse locations. Logical security consists of software safeguards for an organization's systems, including user ID and password access, authentication, access rights and authority levels. These measures are to ensure that only authorized users are able to perform actions or access information in a network or a workstation. A converged security system needs to be an open architecture with a common set of standards in order to be used efficiently.

HBMG's logical security services provide:

Technology Audit and Compliance
IT Governance
Security Process Engineering and Support
Information Risk Assessment
Develop and Implement Global Security Process

STRATEGY

Most companies plan by looking out the rearview mirror to see what's chasing them. HBMG provides a range of strategic services to help your company look through the windshield as far as the eye can see. We use a futures roadmap and forecast to enhance your business foundation with emerging technologies, ensuring growth and profitability for your company. We also create tactical implementation plans, and are with you every step of the way as you determine what steps to take to be successful in this evolution of your environment.

Change is happening at an increasing pace, making knowledge of and preparation for the future a must for survival. HBMG's senior, experienced professionals are world-recognized futurists. Experience across a range of technologies prepares this team to provide insight on digital convergence, collaboration, and smart products as the team recommends the right Strategic Framework for you.

Steps in the Strategic Insights and Futures process can include:

- Identification of future trends and disrupters
- Assistance planning technology, research, and science
- Development and definition of roadmap
- Terrain mapping of markets and technologies
- Assistance in technology acquisition
- Training in technology management and tools
- Technology transfer and commercialization
- Assessments of current technology and business
- Grand Challenges workshops

COLLABORATION

Collaboration fosters innovation, ties enterprises together with others, and leverages the capability of all partners. HBMG's eManagers, a streamlined suite of Web 2.0 applications, creates an on-demand online platform for secure collaboration between any number of authorized users, departments, and even competing companies. It's an efficient and affordable solution for all document and data management needs.

The eManagers Collaboration Suite module-based tool can be formatted for any number of business processes, and can be accessed any time, anywhere. eManagers is a rapidly deployable, highly customizable suite providing centralized user administration and user authentication for security. It also helps your company with green initiatives as you change business processes.

Some functions of eManagers modules include:

- eLogs: content management
- PI logs: organization of public hearings processes, public comments, and stakeholder contact information
- Calendar: coordinates project and staff calendars across multiple email platforms
- Task manager: creates, documents, and tracks tasks assigned to project personnel
- Right of Way (ROW): tracks information for acquisition of parcels
- MIMS: tracks material field sample collection and testing; performs statistical analysis of test results producing FHWA accepted reports.
- TimeCard: documents employee time card information
- Other functions include newspaper ad management, open records request management, and utility package relocation management
